Description

One impact of COVID-19 has been a reduction in availability of farmer's markets and increased safety concerns around grocery shopping. Local Produce aims to connect consumers directly with the local vendors they love.

Features

- Searchable marketplace of local products

- Ability for vendors to create and edit profiles

- Registration and login for users

- Vendor showcase on homepage

- Navigation that recognizes user roles

Planning - User Stories

- Users can filter marketplace products based on product type, vendor location, and whether is product is organically grown.

- Vendors can link their existing websites to their profiles.

- Vendors can maintain their product listings according to availability.

Planning - Database

- Users

- Vendors

- Products

Technology Stack

- Java

- IntelliJ

- Bootstrap 5

- CSS

- Spring Boot

- Thymeleaf

Demo

What I Learned

- Group coordination (Trello and Agile Principles)

- Critically debugging

- Create and maintain user sessions

What's Next

- Adding a feature to allow users to keep track of their favorite vendors.

- Adding a feature to allow users to rate vendors.

- Adding a feature to keep a calendar of events.
